What_is_cloud_computing_theory_kviz.pdf

Which of the following is an example of virtualization?

d) ker lahko na enem fizicnemu strezniku laufamo vec virtualnih racunalnikov

Which resources provide the ‘brains’ to process your workloads, including what is required to process and run requests from applications?

a) ker compute vsebuje procesorsko moc

When you need to provision a resource within the cloud, _____ makes it almost immediately available to you to allocate where and when you need it.

d) on demand v praksi pomeni da tocno tisti cas ko rabimo se porablja in ne ves cas

A _____ cloud deployment model is where a vendor makes available the use of shared infrastructure, including compute, storage and network resources, that can be provisioned on demand and typically accessed over the internet.

d) public ker ponudnik nudi infrastrukturo preko interneta in si jo deli vec uporabnikov

How are costs generally charged for cloud resources?

a) ker placas samo kolko porabis

As an example of an important cloud characteristic, let's say you deploy a small website today. Next week, you add complex artificial intelligence services to it that are provided by a public cloud vendor. The following week, you deploy your website to multiple regions around the globe.

1. ker lahko sproti dodajas storitve ko jih rabis

Kilian Trunk, 2.4.2026

The _____ cloud service model offers a balance between customization and user control, allowing developers to focus on designing at the application layer while the service handles the administration of the virtual architecture, including the network and operating system.

b) ker paas omogoca razvoj aplikacij brez upravljanja infrastrukture

As an example of an important cloud characteristic, let's say you deploy a small website today. Next week, you add complex artificial intelligence services to it that are provided by a public cloud vendor. The following week, you deploy your website to multiple regions around the globe. What concept or characteristic of cloud computing does this represent?

a) growth ker lahko aplikacijo siris in dodajas nove funkcije in regije

Which of the following are not the sole responsibility of public cloud customers? (Choose 2 answers)

a), d) ker je odgovornost deljena med ponudnikom in uporabnikom

Which cloud resource saves and retains data, and is available at an almost unlimited amount within the cloud?

d) ker storage sluzi za shranjevanje podatkov

The _____ cloud service model offers the greatest amount of user customization and control but requires the greatest amount of user administration including the operating system, but not physical hardware.

a) ker iaas da najvec nadzora nad sistemom

What benefit of cloud computing allows you to increase or decrease the power or quantity of resources at any time, without extensive installation or physical processes of provisioning?

b) ker scalability pomeni da lahko povecas ali zmanjsas vire

You have been hired as an IT summer intern for a small, but quickly expanding, restaurant chain. The restaurant chain owner wants to expand her online presence by creating a website that will add more online features such as downloadable menus, real-time reservations, online ordering, web-based email, and a possible interactive chat during restaurant hours. The website will have high access demands from the 4:00 pm to 11:00 pm peak hours, and slower access demands during off-peak hours. The owner does not have any IT experience and does not want to become involved in the extra work of maintaining IT equipment. What do you recommend she do?

b) ker public cloud ne rabis vzdrzevati in se prilagaja obremenitvi

Public cloud vendors have a common definition of what aspects of security are the vendor's responsibility and what aspects of security are the end user's responsibility. This is referred to as the Shared Responsibility Model. Under the Shared Responsibility Model, which of the following would be the end user's responsibility?

d) ker uporabnik mora poskrbeti za svoje podatke

The _____ model requires no software installation and focuses on design simplicity and ease of use. It offers a minimal level of service customization.

b) ker saas ne rabis nic namescat in samo uporabljas

You are leading a team of developers on a project whose goal is to improve customer experience on a credit card company's website. The solution requires that the developers write business requirement-oriented custom code. Your client wants the developers not to have the overhead of managing operating systems, runtimes, and middleware. Which of the following cloud offerings would you suggest to your client?

b) ker paas odstrani skrb za os in infrastrukturo

Kilian Trunk, 2.4.2026

A business uses a combination of vendor-managed hardware, such as AWS, Azure, or Google Cloud, and its own hardware on premises to host virtualized resources. This is an example of the _____ cloud deployment model.

c) ker hybrid pomeni kombinacijo clouda in lokalnega sistema

One can argue that security on the public cloud is superior to on-premise security. Why is this? (Choose 2 answers)

a), c) ker ponudniki sledijo strogim varnostnim standardom

What is a key benefit of Virtualization?

a) ker rabis manj strojne opreme

Which of the following cloud computing concepts refers to increasing or decreasing compute resources based on demand?

a) ker elasticity pomeni prilagajanje glede na potrebo

Which resources provide the connectivity allowing all other resources to communicate with each other?

a) ker network povezuje vse vire

In what way is a private cloud model similar to a public cloud model?

c) ker oba uporabljata virtualizacijo

Which of the following is not a characteristic of the public cloud?

b) ker cloud nima enkratnega placila ampak sprotno

Public cloud vendors have a common definition of what aspects of security are the vendor's responsibility and what aspects of security are the end user's responsibility. This is referred to as the Shared Responsibility Model. Under the Shared Responsibility Model, which of the following would be the end user's responsibility?

a) ker uporabnik skrbi za svoje podatke

Kilian Trunk, 2.4.2026

What cloud resource type stores structured data used by cloud applications?

d) ker database hrani strukturirane podatke

izdelan S3 "bucket", ki gosti tudi statične spletne strani poveži s programom grafični vmesnik za delo z datotekami. Ne pozabite na dokaze o delu. Zaslonske slike.
